

## ELISOR

Jersey type shallot clone variety, regenerated, OYDV-virus free

**Name of breeder:** INRA

**Name of maintainer:** Agri Obtentions SA

**Botanical name:** *Allium cepa* gr. *aggregatum*

**Common name:** Shallot

**Variety name:** ELISOR

**Variety type:** Long

### VARIETY INFORMATION SHEET

### OBSERVED CHARACTERISTICS

#### FOLIAGE

Attitude	Semi-erect	3
Waxiness	Medium to strong	6
Intensity of green colour	Dark	7
Cranking	Absent or weak	1
Length	Medium to long	6
Diameter	Medium	5

#### BULB

Number of bulblets (degree of splitting into bulblets with dry skin around each bulblet)	Strong	7
Bulblet size	Medium to large	6
Bulblet height	Very tall	9
Bulblet diameter	Small to medium	4
Position of maximum diameter	Towards root end	3
Width of neck	Medium	5
Shape in longitudinal section	Medium ovate	2
Shape of stem end	Strongly sloping	6
Shape of root end	Strongly tapered	5
Base colour of dry skin	Brown	5
Intensity of base colour of dry skin (intensity of colour)	Medium	5
Secondary colour of skin (= hue of dry skin)	Brownish	5
Colour of epidermis of fleshy scales	Reddish	3
Colour of flesh	Pinkish	3
Intensity of flesh colour	Medium	5

#### PHYSIOLOGICAL CHARACTERISTICS

Number of growing points per kg	Medium	5
Dry matter content	Medium to high	6
Tendency to bolt	Absent or very weak	1
Time of harvest maturity	Medium	5
Time of sprouting during storage (=storage period)	Late to very late	8
Male sterility	-	0
