

LONGOR

Variety obtained by selective breeding of the Jersey shallot, OYDV-virus free

Name of breeder: Agri Obtentions SA
Name of maintainer: Agri Obtentions SA
Botanical name: *Allium cepa* gr. *aggregatum*
Common name: Shallot
Variety name: LONGOR
Variety type: Long

VARIETY INFORMATION SHEET

Variety produced in conventional and organic farming.

FR-BIO-01
Agriculture France

OBSERVED CHARACTERISTICS

FOLIAGE

Attitude	Semi-erect	3
Waxiness	Medium	5
Intensity of green colour	Dark	7
Cranking	Absent or weak	1
Length	Medium to long	6
Diameter	Medium	5

BULB

Number of bulblets (degree of splitting into bulblets with dry skin around each bulblet)	Medium to strong	6
Bulblet size	Medium to large	6
Bulblet height	Very tall	9
Bulblet diameter	Small to medium	4
Position of maximum diameter	Towards root end	3
Width of neck	Medium	5
Shape in longitudinal section	Medium ovate	2
Shape of stem end	Strongly sloping	6
Shape of root end	Strongly tapered	5
Base colour of dry skin	Brown	5
Intensity of base colour of dry skin (intensity of colour)	Medium	5
Secondary colour of skin (= hue of dry skin)	Brownish	5
Colour of epidermis of fleshy scales	Reddish	3
Colour of flesh	Pinkish	3
Intensity of flesh colour	Medium to dark	6

PHYSIOLOGICAL CHARACTERISTICS

Number of growing points per kg	Medium	5
Dry matter content	High	7
Tendency to bolt	Absent or very weak	1
Time of harvest maturity	Very early	1
Time of sprouting during storage (=storage period)	Late	7
Male sterility	-	0
